

Solutions for  
Connected Care

# Remote Patient Monitoring

## What is Remote Patient Monitoring ?

Remote Patient Monitoring or RPM, is a digital healthcare solution that enables care givers to seamlessly extend care to patients within the comfort of their homes.

RPM empowers caregivers with the ability to make well-informed decisions regarding treatments, interventions, and recommendations, all derived from the data collected directly from patients.

## What you will need :

### > SanteVue Software

SanteVue is an easy to use RPM software that enables you to run a smooth and effective RPM program. It is cloud based.

### > Medical Devices

Bluetooth enabled medical devices such as Blood Pressure Monitor, Weighing Scale, Glucometer, Pulse Oximeter and Thermometer

### > Internet Connection

Internet connection is required for accessing the services
